

# Splints by Evabelle – Metals & Care Guide

All of our splints are crafted from nickel-free, hypoallergenic metals chosen for both function and style. Below is a detailed guide to each metal and how to care for it.

## Sterling Silver

Features: Classic, hypoallergenic, highly durable.

Best for: Daily wear and long-term use.

**Care Instructions:** 

- Store in a dry, airtight pouch to prevent tarnish.
- Polish with a silver cloth regularly to maintain shine.
- Avoid harsh chemicals (chlorine, cleaning supplies).

#### **Brass**

Features: Lightweight, warm golden tone, affordable.

Best for: Stylish, budget-friendly option.

**Care Instructions:** 

- Brass naturally develops a patina (antique look). If you prefer it shiny, polish with a brass-safe cloth or lemon + baking soda paste.
- Keep dry to reduce tarnish.
- Store separately to avoid scratches.

#### **Bronze**

Features: Warm reddish-gold tone, durable, traditional jewelry metal.

Best for: Customers who enjoy a vintage look and long-lasting wear.

#### **Care Instructions:**

- Bronze naturally darkens over time (patina). Polish with a bronze-safe cloth or mild lemon + baking soda paste if shine is preferred.
- Keep away from moisture to reduce tarnish.
- Store separately to avoid scratches.

### Gold Fill (Rose or Yellow)

Features: Luxurious appearance, durable bonded gold layer.

**Best for:** Elegant, jewelry-like splints at a lower price than solid gold.

#### **Care Instructions:**

- Clean with mild soap and water; dry thoroughly.
- Avoid abrasive polishing (protects the gold layer).
- Store in a fabric-lined jewelry box to prevent wear.

## **Quick Guide**

- Sterling Silver: Daily wear, polish cloth.
- Brass: Budget option, polish if patina isn't desired.
- Bronze: Durable vintage look, polish if patina isn't desired.
- Gold Fill: Elegant, gentle care only.

All Splints by Evabelle designs are nickel-free & hypoallergenic, created for daily wear and long-term comfort.
